CATTLE PROGRAMS

**RED ANGUS
STABILIZER®
CHAROLAIS**

www.paringalivestock.com.au

RED ANGUS

Our Angus program remains focused on commercial breeding objectives and profitability. We continue to select our Angus based on performance – with emphasis on fertility, carcass, calving ease and soundness.

Our Red Angus are uniquely bred from a black genetic base, giving greater performance accuracy. Paringa Red Angus have been used widely in crossbreeding programs over Droughtmaster, Santa Gertrudis, Herefords and Charolais.

Paringa were the first to sell an Australian bred bull at the Denver Stock Show in 2011.

KEY FEATURES

- Unique global breeding program
- Black Angus parentage (Te Mania base)
- Paringa red herd ranks in top 10% on black database
- Carcass traits rank in top 1% for muscle & marbling
- Highly fertile with extreme calving ease

STABILIZER®

The Stabilizer® breed is a multi-breed composite developed by Leachman Cattle Company. The breed is based on over 30 years of research at the Meat Animal Research Centre, Clay Centre, Nebraska. The original composition was based on 25% of four breeds: Angus, Hereford, Simmental and Gelbvieh. Stabilizer® combines the fleshing ability, marbling and moderate size of the British breeds with the muscle, milk and growth of the European breeds. As a four breed composite the Stabilizer® retains 75% of the F1 hybrid vigour. The females over their life-span are proven to wean 23% more weight than their purebred counterparts.

They are polled, either black or red and can be found in a wide range of environments in Australia, NZ, USA, South America and the UK.

KEY FEATURES

- Increase production/ha (higher feed conversion)
- Greater rebreeding (by up to 20%)
- Increase longevity (by up to 2 years)
- Better bull usage – hybrid vigour makes them tougher
- Global database of over 300,000 animals characterised for all traits

CHAROLAIS

The Paringa Charolais offer true calving ease, explosive growth, carcass quality and a gentle nature. We select for important economic traits which impact client profitability and are 100% performance recorded, therefore accountable for every breeding decision. Our Charolais heifers calve unassisted at two years of age, often weaning bigger calves than the mature cows and 80% rebreed within 4 weeks.

Used in the Charolais Progeny Test program and large scale ET crossbreeding projects for northern Australia for many years.

KEY FEATURES

- Performance focused & tested
- Herd required to calve unassisted at 2YO
- Highest ranked Australian Domestic Index herd
- Easy calving with good early growth pattern
- High marbling, big primals, good fat cover
- Bulls are tough, robust and adaptable
- Extremely feed efficient
